

## Colorado's Native Buffalograss

### Key Highlights:

Low  
Maintenance

Superior  
Drought  
Tolerance

High  
Heat  
Tolerance

**Colorado's Native Buffalograss** possesses all the best qualities of a native turfgrass. In landscaping, it is ideal for low maintenance areas such as large residential or commercial lawns, parks, street parkways, and even green roofs. This warm season grass is naturally very drought tolerant and insect/disease resistant, thriving in full sun conditions and extreme climates. The soft grass blades maintain a rich green color while requiring low fertility and tolerating some traffic. Buffalograss requires limited mowing and can be left unmowed for a natural look.

**The Only Turfgrass Native To The United States.**

\*limited seasonal harvesting June-August
