

## Colorado's Sport Bluegrass

**Colorado Sport Bluegrass** blend is available grown on native sand. This turfgrass has a beautiful dark green color and a soft padding-like texture. During summer months, it thrives in sunny areas and maintains the ability to rejuvenate quickly. Its high traffic tolerance and disease resistance make this variety best for handling intense athletic use and golf courses.

This bluegrass possesses a low, compact growth habit, making it ideal for short cut applications where a mowing height of under 1" is desired. Colorado Sport has a reputation for early spring green up and holding its color late into the fall.
