

CARE AND MAINTENANCE

Basic precautions and care will insure that your Swisstrax surface will maintain its appearance and optimum performance for many years. These tips are not expensive and do not take a lot of time, but can do a lot to protect your investment for future use.

MAINTENANCE CLEANING:

For indoor application, a high pressure hose can be used to clean the surface, as well as force any debris that has collected under the perforated tile systems. A push broom, shop vac and/or yard blower can be used as well for both perforated and solid tile systems. Do not use stiff bristle brushes to scrub as this can scratch the tile surface. Over time dirt, leaves, rocks and other debris may accumulate under the tile. If this does occur to the point where the tile is full, unsnap the tiles in large sections and slide the tile out of the way to clean the subsurface.

A wet rag and some good ole elbow grease is sufficient in cleaning most spills that may take place on the tiles. For tougher spills, a degreaser may be required.

PRECAUTIONS:

- Keep any kind of flame (cigarettes, charcoal grills, fireworks, etc.) away from the surface.
- Keep surface free of leaves, grass clippings, or other debris. A good leaf blower works well to help keep the surface clean.
- Swisstrax will resist the harmful effects of rain, snow, and ice when used outdoors. Some color loss is inherent in the product and will not affect the quality of the surface.
- Surface cleaning equipment, such as leaf blowers, will exude heat, do not to place these tools on the tile as damage may occur to the surface.

REPLACING TILES:

Tiles are replaced in a matter of seconds. Insert a hook, paint can opener, or flat headed screw driver into a hole closest to the corner of the tile which does not have receivers and pull up.
